

Imaginary Friend Maker

We make your imagination a reality

Little Rock, Arkansas - Imaginary Friend Maker was first developed in March 2000, in house by a child that was made into reality by a scientist. Thomas Heart developed the chip that allows a child to see a "Imaginary Friend." By creating a bracelet that can tap into the nervous system and enter the brain. While wearing this bracelet the child will be able to create their forever imaginary friend. The bracelet comes in a variety of colors and is adjustable. When the child is ready for sleep they can just put their bracelets on their charging dock and wake up to their friend in the morning.

"This device is very important for a child to help form their imagination and give them the ability to be creative and express themselves." - Dr. Kune

"I feel comfort in knowing that my child always has a friend with him and never feels alone." - Stephanie Adkins

It is very important for children to create bonds with others. If children do not socialize at a young age, socialization occurs when a child learns the attitudes, values, and actions appropriate to individuals as members of a particular culture. No child wants to be outcasted by themselves during recess. This allows every child to have a friend to play with when they're lonely. No child will feel outcasted by their peers for not having friends because they will have Imaginary Friend Maker.
