

"The Safety Search First Responder will help us save lives. It is a true blessing and will be pivotal in the future of fire safety." Chief Randy Franken, Dallas, TX Fire Dept.

"We have never felt more confident and secure in our ability to carry out our responsibilities." Richmond, VA Police Officers Jay Daniel and Olivia Benson.

"This is an excellent product. It helps us safeguard our first responders and those we serve, and it has helped us improve crime rates and performance." Sheriff Todd Lupton, Wake County, NC

Our Mission: Working to provide security solutions that will inform and protect first responders, individuals, and communities.

About Us: DSP founders, Zachary Henderson and Lucy Wallace, have more than 50 years of combined education, training, and experience in the development of security products. They are committed to expert service and quality.

DSP: DEFENDER SECURITY PRODUCTS

the nation's leading developer of security and emergency services technology and products is excited to introduce its

Safety Search First Responder Watch

This cutting edge technology enables first responders to safeguard themselves and others by screening emergency areas prior to entry. Access to this valuable information allows personnel to evaluate options and make decisions that will result in purposeful action, enhanced safety, and improved effectiveness and efficiency.

Security is everyone's concern ... but for more than 25 years, it has been our business.

What will the Safety Search First Responder detect?

- All persons within a certain radius of the area in question via x-ray and heart beat sensors
- Extreme heat signatures and fires including the exact source and cause.
- All potential threats such as firearms, sharp objects, blunt objects, explosives, and drug paraphernalia

Our company was founded on the dream that we can create a safer community for all that does not sacrifice freedom, and ensures the security of our public servants. We at DSP believe that we have succeeded with the Safety Search First Responder.

A close-up photograph of a black smartwatch with a blue digital display. The watch is positioned in the center of the page, with text boxes overlaid on it.

Our device is the Safety Search First Responder. It operates based on a computer chip that is added to a department's current dispatch software for utilization by the local law enforcement, firefighters, EMTs, and other agencies as desired. The area is accessed via a smartwatch worn by the responding personnel when activated by the dispatch service. Safety Search First Responder then surveys the location or scene and projects a 3D live image of the area under investigation.

Privacy Concerns

We at DSP pride ourselves on ensuring that no personal liberties or rights will be compromised by use of the Safety Search First Responder. It is our goal to help foster trust between public officials and citizens.

While all patrol and service personnel will be equipped with the watches, the Safety Search First Responder technology can only be activated by dispatch in response to an emergency or call for help.

Reliable safeguards are in place to prevent its misuse.
