OVERMEDICATION FOR ADHD

By: Morgan Mugnolo,
Emmalee Beardslee, and
Josh Bishop

WHAT IS ADHD?

ADHA is a neurobehavioral disorder characterized by difficulty paying attention, excessive activity, and impulsivity. Effect ability to learn, function at home, and development socially.

WHAT CAUSES ADHD?

Likely due to a persons genes and their interaction to the environment. Research has shown links between ADHD and low birth weight, alcohol, cigarette smoke, or exposure to toxins in the environment such as lead.

WHO IS AFFECTED BY ADHD?

Appears usually in grade school for most children, but can be identified anytime from pre-school to adulthood. Symptoms in young adults may include procrastinating, managing time poorly, easily losing one's temper, making hasty decisions, or having trouble maintaining steady work or relationships.
