

Goal 1.6

Reflection

Biological issues in society have risen in the last century. From climate change to damaging aquatic life the problem is a real issue and is getting worse affecting the human population. Being able to understand how to apply biology to issues in society is very important. This issue is very important to me personally because I believe this is a pressing issue that will affect my future children. Hopefully with research and encouragement the earth will become a greener place.

In my English 400 class I was able to research the topic of climate change and educate my peers. "Climate change is happening, humans are causing it, and I think perhaps the most serious environmental issue facing us"- Bill Nye. I absolutely love this quote because I think it speaks the most truth and this is what I touch base on in my paper. Bringing up the issues in society. I touch base on greenhouse gases, ocean acidification, and harvesting for commercial purposes. I was clearly able to apply my knowledge of biology to the issue of climate change.
