

November 7, 2018 -- FOR IMMEDIATE RELEASE

Handheld portal device released

LOS ANGELES, CA -- The new Handheld Portal Device was announced yesterday by scientific development company Aperture Laboratories.

“People nowadays want to travel the world,” said company president Amy Sivils when making the announcement. “With a Handheld Portal Device travelers can go anywhere at the push of a button.”

The Handheld Portal Device is user friendly. Hold the device and point it towards a flat wall. Press the intent button and, when prompted, say your intended destination address clearly and loudly to the device. Once you finish, push the GO button and the portal will be created. Enter the portal and enjoy your seamless travel to anywhere in the world!

“The portal device transportation technology uses energy generated from the Sarcoline Crystal recently discovered deep in the Amazon rainforest,” added company representative Abby Jones.

The Handheld Portal Device includes technology used in the Time-Travel Chamber that was released by Aperture Laboratories earlier last year. This technology is important to make the traveling process as comfortable as possible. “When the Handheld Portal Device is used the traveler does not experience any harmful or unpleasant side effects,” said Mrs. Jones.

The handheld portal device costs \$500 and has a traveler limit of four.

Aperture Laboratories is offering the handheld portal device at 10 percent off for the first 50 customers at their website, www.aperturlaboratories.com, with the coupon code PORTAL.
