

## A FEW THINGS TO CONSIDER

- There are no recycling resources at the Longwood Village or Lancer Park.
- The Landings does not have enough recycling resources.
- Longwood students produce a lot of waste and about 70% of the American waste stream is recyclable, how much recyclable waste is going straight to Landfills?
- There's plenty of recycling stations on campus, so why can't they bring these units to off campus housing?

## COLD, HARD FACTS

- The average person in the U.S. produces about 4.4 pounds of trash a day and recycles just a third of that.
- 70% of the American waste stream is recyclable, however we only recycle about 30% of it. One recycled aluminum can can save enough energy to power a TV for three hours.
- Glass containers and bottles only take about 30 days to be recycled, converting recycled glass into new products is often cheaper than using raw materials to produce new glass products.
- A glass bottle can take up to 4,000 years to decompose.
