

T-test for family completion of activity

Completion of activity	Mean	t-statistic
Yes	7.254	t=1.254
Partially	6.500	

Note. $p < .05^*$, $p < .01^{**}$, $p < .001^{***}$, $N=66$

My independent variable states "did your family complete the activity" my two variables were yes or partially. My dependent variable is family involvement. The mean family involvement score for yes is 7.254 out of 10 and partially was 6.500 out of 10. My t-test value was 1.254 which means it is not significant. Therefore completion is not significantly different for these two groups.
