

Table 2. Analysis of Variance (ANOVA) of family engagement and education within the household.

Highest Education	Mean Engagement	F-value
Highschool or Less	6.71	0.3812
Some College or Trade	7.34	
College Degree or More	6.75	

Note: $p < .05^*$, $p < .01^{**}$, $p < .001^{***}$

The dependent variable for this ANOVA was engagement of the family. This was asked on a 0-10 scale. The independent variable for this ANOVA was the highest education in the household. Respondents chose either from “Some high school,” “High school diploma or GED,” “Certification from a trade or vocational school,” “Some college,” “Associate’s degree,” “Bachelor’s degree,” or “Graduate degree or more.” The variables are recoded by “Some high school” and “High school diploma or GED” to “Highschool or Less.” “Certification from a trade or vocational school,” “Some college,” and “Associate’s degree” were recoded to “Some College or Trade School.” And “Bachelor’s degree” and “Graduate degree or more” were recoded to “College Degree or More.” According to the ANOVA results ($F=0.3812$) there is no significant difference between these means.
