

Quantitative Findings

The following variables were analyzed using descriptive statistics: Hours worked weekly by parents and parental involvement with their child. For hours worked by parents 1 respondent selected 0-10 hours, 1 respondent selected 21-30 hours, 7 respondents selected 31-40 hours, and 2 respondents selected 41-50 hours. The Findings can be seen in figure 1.

Figure 1.

Hours Spent Working

The dependent variable is parent involvement measured on a scale from 0 to 10. The mean parent involvement score was 7.73. The median score was 8, the mode was 10 and the standard deviation was 2. Table 1 shows the findings.

Table 1.

Parental Involvement

Parental Involvement	Mean	Median	Mode	S.D.
	7.73	8	10	2.94

A bivariate shows the mean of parental involvement and the hours worked by the child's parent(s). This figure shows the correlation between the hours worked by the parent and the amount of time they must devote to their child's academic career. According to the graph most parents who worked 21-30 hours showed a higher involvement in the child's academic life.
