

Isabelle Villarreal: Professional Personal Statement

A soon to be pre-med biology graduate from Longwood University, I would love the opportunity to apply my refined skill set to the opening of lab assistant in your medical laboratory. I worked as a research and lab assistant for two years, focusing on microbial genetics and metagenomic fingerprinting of bacteria, where I amassed a collection of skills necessary for this job and learned about my passion for research. The independence that came as a research student allowed me to confidently and efficiently learn the skills of PCR, qPCR, gel electrophoresis, serial dilutions and gram staining. As a passionate individual for research who thrives in high demand settings while maintaining an organized workspace, I feel that I would be a great fit for your medical laboratory.
